Released: July 2, 2018 Issue: 17-18

<u>Agricultural News:</u> Days suitable for fieldwork were 5.8. Weather conditions were clear with temperatures above normal. Farming activities for the week included planting soybeans, making hay, and harvesting wheat.

## SOIL MOISTURE for week ending 07/01/18

	Very Short	Short	Adequate	Surplus	
	%	%	%	%	
Topsoil	-	13	76	11	
Subsoil	-	13	74	13	

<sup>-</sup> Represents zero.

## **CROP and LIVESTOCK CONDITIONS for week ending 07/01/18**

Crop	Very Poor	Poor	Fair	Good	Excellent	
	%	%	%	%	%	
Apples	-	-	20	75	5	
Grapes	-	1	23	76	-	
Peaches	-	-	15	61	24	
Corn	1	6	19	55	19	
Cotton	1		26	68	3	
Hay, Alfalfa	-	4	34	58	4	
Hay, Other	4	6	31	58	1	
Peanuts	1	2	22	70	5	
Potatoes, Summer	-	2	22	76	-	
Soybeans	2	7	18	69	4	
Tobacco, Burley	-	-	33	62	5	
Tobacco, Fire-cured	-	1	74	21	4	
Tobacco, Flue-cured	-	2	29	61	8	
Pasture	1	6	28	50	15	
Livestock	-	3	25	64	8	

<sup>-</sup>Represents zero.

# CROP PROGRESS for week ending 07/01/18

Crop Stage	This Week	Last Week	Last Year	5-Yr Avg
	%	%	%	%
Peaches harvested	1	-	-	-
Barley harvested for grain	91	68	98	-
Corn silking	33	7	43	28
Corn dough	4	-	-	-
Cotton squaring	58	42	56	51
Peanuts pegging	22	10	17	13
Potatoes, Summer harvested	24	9	27	21

**REPORTER COMMENTS BY COUNTY –** Comments are based on remarks made by extension agents, farmers, commodity specialists, and other knowledgeable individuals.

# **NORTHERN**

# **ROCKINGHAM (Doug Horn)**

Less than 0.1 inch rain and hot temperatures at the end of the week. First cutting of hay finally finished up. Wheat harvest has started.

## **LOUDOUN (Jim Hilleary)**

Several days of dry weather allowing field work.

#### WESTERN

### **ROCKBRIDGE (Thomas Stanley)**

Clear weather with above normal temperatures characterized the week. Many farmers are catching up on harvesting first cutting hay. Yields are good, but quality is poor due to earlier weather delays for harvesting. Second cutting hay is looking promising at this point, but very little has been harvested. Barley harvest has been hampered by wet weather earlier and lodging.

## **BATH/HIGHLAND (John Benner)**

First fully dry week in June. Large number of acres of hay made.

#### **CENTRAL**

### AMELIA (Laura Siegle)

We experienced more dry days this week, some producers are out making hay.

## **CAROLINE (Mike Broaddus)**

Despite damage to crops in low lying, poorly drained areas, crops look well. Lack of rainfall in the past seven days in combination with high temps have dried the topsoil to the point that another rain is needed.

#### **EASTERN**

## KING GEORGE (Mike Broaddus)

Despite damage to crops in low lying, poorly drained areas, crops look well. Lack of rainfall in the past seven days in combination with high temps have dried the topsoil to the point that another rain is needed.

#### **CHARLES CITY (Scott Reiter)**

Wheat harvest is just about finished. Yields were lower than expected and quality/test weight was poor from the start. The mid-June rains reduced test weight further. Looks like 30-60 bu/A is going to cover most field averages. Soybean planting made progress this weeks as fields dried out. Planting should finish within a week. Replanting is still occurring in full season and double crop plantings based on rainfall totals at individual fields. Sunshine and warm temperatures finally have cotton and peanuts growing and getting some dark green color.

## **SOUTHWESTERN**

# **GRAYSON (Kevin Spurlin)**

Timely rains in areas of the county have maintained soil moisture levels at an adequate level for productivity of most crops. Corn is progressing very well. While I would characterize the area as marginally dry of late, there has been enough moisture to avoid any issues. The recent weather has tempted farmers to mow hay, but conditions have not been conducive for curing that hay, and some has been rained on.

#### **SOUTHEASTERN**

# **GREENSVILLE (Sara Rutherford)**

Southeast portion of county received heavy rain over the past week keeping fields saturated, causing stunting or drowning of crops.

#### **CHESAPEAKE CITY (Watson Lawrence Jr.)**

Rain has been the factor most affecting crop production in 2018. Corn is tasseling/silking and has good yield potential. Wheat harvest and test weights were lower than 2017. Soybean crop is late planted this year with some replanting needed. Early cuttings of hay has been difficult to schedule between frequent rainy days.

## PRINCE GEORGE/SURRY/SUSSEX (Scott Reiter)

Wheat harvest is just about finished. Yields were lower than expected and quality/test weight was poor from the start. The mid-June rains reduced test weight further. Looks like 30-60 bu/A is going to cover most field averages. Soybean planting made progress this weeks as fields dried out. Planting should finish within a week. Replanting is still occurring in full season and double crop plantings based on rainfall totals at individual fields. Sunshine and warm temperatures finally have cotton and peanuts growing and getting some dark green color.
